

Growmaster

Nursery management system for the modern nursery. Designed to make running your business easier, saving you time and money.

Stock control

All of the tools you need to manage a 'living' stock. Hold multiple batches of stock in a Growing or Saleable state. Move whole or part batches of stock between nursery locations or change sizes as the need arises.

All stock updates are recorded in an audit trail. Give a specific reason for stock updates and report on them, e.g. how much stock was lost because of frost damage.

Labelling

Print picking, batch or location labels with prices, barcodes, location names, etc. Create descriptive or retail labels with pictures and customer pricing. Simple label queuing with 'edit before print' capability. All label layouts can be customised.

Reporting

Over 200 standard reports, plus a comprehensive report maker enabling you to create custom reports. Print reports or export to Microsoft Excel.

Sales order processing

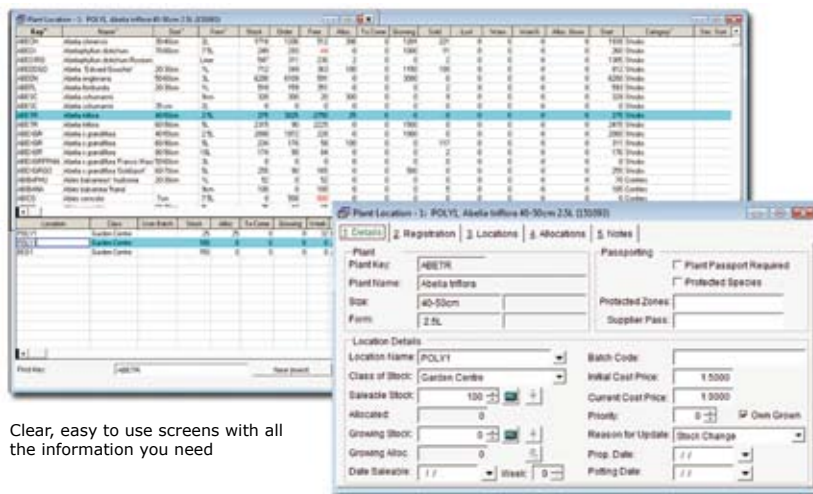

Manage the complete sales process from quotations through to invoicing. Many different ways to enter orders to suit your needs. Use current, next season, or customer specific pricing. Allocate stock to avoid over selling. Review previous orders and quickly see what stage each order is at.

Create cumulative picklists in a sensible 'walk order' to help staff. Delivery notes can be bulk converted into invoices with or without printing.

Purchasing

Purchase for general or job-specific stock, or generate purchase orders directly from stock shortages. Produce quotation requests for one or many suppliers.

Goods in function to deliver stock in as growing or saleable stock. Deliver in as new batch or merge into existing batches.

Clear, easy to use screens with all the information you need

Accounting

Specify category nominals for Sage Line 50 accounts link. Generate CSV export for invoices and credits, and changes to customers and suppliers. Export to a number of third-party accounts packages.

Handheld

Growmaster handheld unit allows quick and easy stock updates and 'cash sale' order entry while walking the nursery with all data quickly imported directly into Growmaster. Optional barcode scanner for use with Growmaster generated barcodes. Small receipt printer available for cash sales.

EDI

Receive orders and send invoices electronically using our EDI module. Vital for trading with many large organisations, such as B&Q or Homebase. Fully integrates with Growmaster sales order processing.

Handheld unit for quick and easy stock updates and 'cash sale' order entry

Contact Manager

Instantly access key contact and customer information, such as contact notes, history and appointments. Centralise and share vital contact information across your company. Log all contact with customers, prospects or suppliers and schedule follow up contact.

Plant Passports and Certificates

Print plant passport information on labels and delivery notes. Automatically print FRM (Forest Reproductive Material) supplier certificates from invoices.

New Place Nurseries Ltd

Growmaster is able to adapt to all of the changes needed in the industry today. Highly recommended.

Steven Lee
Sales Director

Fairweather's

Growmaster has become the backbone of the nursery's stock and order management. The handheld unit has greatly improved nursery efficiency.

Patrick Fairweather

J & A Growers Ltd

Growmaster has allowed the company to expand three fold in the last 5 years without the need to recruit any additional admin staff. Support is second to none.
