

# OKI Printers

As the only OKI Business Gold Partner in the UK specifically serving the horticultural industry we are ideally placed to advise you on which OKI printer would be best for your needs.

## Models

We recommend the OKI C710 printer. The printer comes with a network card as standard (C710n) and can also be bought with a duplex unit for the automatic double side printing of documents and certain label types (C710dn). Due to its Postscript/PCL capabilities the C710 can be used to duplex print our premium 'P1' media self-ties and swing-tags and can also take stick-ins up to 250 microns.

## Speed and Quality

The C710 prints at class leading speeds of up to 30 pages per minute colour and 32 pages per minute mono at 1200 x 600 dpi. ProQ2400 and High Definition Colour technology work to give you detailed printouts with greater colour depth, reduced grain and a high gloss feel. The C710 uses award-winning LED single pass print technology which requires less user intervention.

## Labels

The OKI C710 can print self-ties, stick-ins, swing-tags, and self-adhesive labels, as well as bed cards and banners. All of the labels are waterproof and UV resistant and if the printer is set-up correctly the labels will last up to a year in normal outdoor conditions.

## Versatility

As well as printing stunning colour labels OKI printers are also general office printers which can be used for all of your normal printing. You can also use them to print a wide range of specialist media such as business cards, menus, flyers and leaflets.
